Oxygen Therapy
WITH O2TODERM

*Revitalize your skin with
pure oxygen*

90% Oxyge Dome

Purified oxygen or negative ions are comfortably infused into the skin, boosting the various benefits of any products applied to the skin during a facial. The machine works by sucking in air from the immediate environment, separating out the nitrogen, and pumping 90% oxygen through the dome to be absorbed by your skin. This revitalizes your skin because every day in our environment we are bombarded with an excess of positive ions that wear down our skin.

Negative ions are effectively used to clean the the air of allergens, pollen, mold spores, bacteria, and more. They fight against free radicals that harm our skin as well as replace damaged skin cells, which helps balance skin pH. As a result, acne-causing bacteria are destroyed, collagen production is stimulated, nutrient intake is supported, and the tone and texture of the skin is significantly improved. It is a comfortable, easy, and fast treatment that effectively refreshes and reinvigorates all skin types!

Time to feel rejuvenation with **high-concentrated oxygen and anion!**

Results after only 1 treatment

Oxygen Infusion

The oxygen gun is an incredibly convenient tool that infuses a mist of concentrated oxygen and anions along with customized serums into the skin. It has the same benefits as the oxygen dome, yet it is especially perfect for permeating specific nutrients and vitamins into the skin.

This treatment re-energizes tired cells in the skin to recover their splendor and youth. As a result, the skin appears more plump, hydrated, and also regains its brightness and clarity.
